■ SPECIFICATIONS

Radio Section

Tuning system:

PLL synthesizer

FM 87.5 to 108MHz Receiving frequencies: MW 531 to 1,602kHz

LW 153 to 279kHz

CD Section

system:

Compact disc audio

Sampling frequency:

44.1kHz

Oversampling:

8 times

Converters:

Dual 1-bit digital/analog

converters

Frequency response:

20 to 20kHz (±1dB)

Dynamic range:

95dB (1kHz)

96dB (1kHz)IHF-A

S/N radio: Distortion:

0.01%

General

Power supply voltage:

DC14V (10.8 to 15.6V

allowable)

Negative ground

Power consumption:

Less than 10A

Speaker impedance:

 4Ω (4 to 8Ω allowable)

Auto antenna rated current:

350mA or less

Dimensions (mm):

178(W) x 50(H) x 152(D)

Weight:

1.6kg (3.52lb)

■ FEATURES

- 1. RDS-EON receiver with PI, PS, AF, TA, PTY, REG and CT
- 2. 24 presets (18FM,6MW/LW)
- 3. Dual 1-bit "Bit-stream" D/A converters
- 4. Plays 8cm discs
- 5. High power 30W x 4 ch max.
- 6. Triggered audio mute for cellular telephone
- 7. Fully detachable control panel

COMPONENTS

Screw	716-0726-01	1
DCP case	335-5331-00	1
Spacer	345-3653-01	1
A-lead	850-6681-00	1

^{*} For improvement purposes, specifications and design are subject to change without prior notice.

To engineers in charge of repair or inspection of our products.

Before repair or inspection, make sure to follow the instructions so that customers and Engineers in charge of repair or inspection can avoid suffering any risk or injury.

1. Use specified parts.

The system uses parts with special safety features against fire and voltage. Use only parts with equivalent characteristics when replacing them.

The use of unspecified parts shall be regarded as remodelling for which we shall not be liable. The onus of product liability (PL) shall not be our responsibility in cases where an accident or failure is as a result of unspecified parts being used.

Place the parts and wiring back in their original positions after replacement or re-wiring.

For proper circuit construction, use of insulation tubes, bonding, gaps to PWB, etc, is involved. The wiring connection and routing to the PWB are specially planned using clamps to keep away from heated and high voltage parts. Ensure that they are placed back in their original positions after repair or inspection.

If extended damage is caused due to negligence during repair, the legal responsibility shall be with the repairing company.

3. Check for safety after repair.

Check that the screws, parts and wires are put back securely in their original position after repair. Ensure for safety reasons there is no possibility of secondary problems around the repaired spots.

If extended damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

 Caution in removal and making wiring connection to the parts for the automobile.

Disconnect the battery terminal after turning the ignition key off. If wrong wiring connections are made with the battery connected, a short circuit and/or fire may occur. If extensive damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

5. Cautions regarding chips.

Do not reuse removed chips even when no abnormality is observed in their appearance. Always replace them with new ones. (The chip parts include resistors, capacitors, diodes, transistors, etc). The negative pole of tantalum capacitors is highly susceptible to heat, so use special care when replacing them and check the operation afterwards.

Cautions in handling flexible PWB
Before working with a soldering iron, make sure that the
iron tip temperature is around 270°C. Take care not to apply
the iron tip repeatedly (more than three times) to the same
patterns. Also take care not to apply the tip with force.

Turn the unit OFF during disassembly and parts replacement.
 Recheck all work before you apply power to the unit.

- 8. Cautions in checking that the optical pickup lights up. The laser is focused on the disc reflection surface through the lens of the optical pickup. When checking that the laser optical diode lights up, keep your eyes more than 30cms away from the lens. Prolonged viewing of the laser within 30cms may damage your eye-sight.
- Cautions in handling the optical pickup
 The laser diode of the optical pickup can be damaged by electrostatic charge caused by your clothes and body. Make sure to avoid electrostatic charges on your clothes or body, or discharge static electricity before handling the optical pickup.

9-1. Laser diode

The laser diode terminals are shorted for transportation in order to prevent electrostatic damage. After replacement, open the shorted circuit. When removing the pickup from the mechanism, short the terminals by soldering them to prevent this damage.

9-2. Actuator

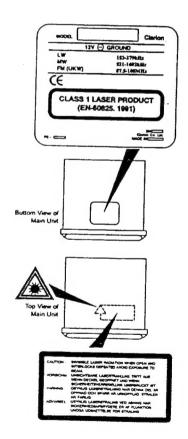

The actuator has a powerful magnetic circuit. If a magnetic material is put close to it. Its characteristics will change. Ensure that no foreign substances enter through the ventilation slots in the cover.

9-3. Cleaning the lens

Dust on the optical lens affects performance. To clean the lens, apply a small amount of isopropyl alcohol to lens paper and wipe the lens gently.

CAUTIONS

This appliance contains a laser system and is classified as a "CLASS 1 LASER PRODUCT". To use this model properly, read this Owner's Manual carefully and keep this manual for your future reference. In case of any trouble with this player, please contact your nearest "AUTHORIZED services station". To prevent direct exposure to the laser beam, do not try to open the enclosure.

■ DIFFERENT FROM ORIGINAL MODEL

FM/MW/LW Radio CD Combination with RDS-EON

(PE-2201E-A / Illumination:Amber) (PE-2201E-B / Illumination:Green)

SPECIFICATIONS

Radio section

Tuning system:

PLL synthesizer

Receiving frequencies:

FM 87.5 to 108MHz MW 531 to 1,602kHz LW 153 to 279kHz

CD section

System:

Compact disc audio

Sampling frequency:

44.1kHz

Oversampling:

8times

Converters:

Dual 1-bit digital/analog converters

Frequency response:

20 to 20,000Hz(±1dB)

Dynamic range:

95dB(1kHz)

S/N ratio:

96dB(1kHz)IHF-A

Distortion:

0.01%

General

Power supply voltage:

DC14V(10.8 to 15.6V allowable)

Negative ground

Power consumption:

Less than 10A

Speaker impedance:

4Ω (4 to 8Ω allowable)

Auto antenna rated current:

350mA or less

Dimensions:

Width 178mm

Height 50mm

Depth 152mm

Weight:

1.6kg

For improvement purposes, specifications and design are subject to change without prior notice.

FEATURES

RDS-EON receiver with PI,PS,AF,TA,PTY,REG and CT

24 presets(18FM,6MW/LW)

Dual 1-bit "Bit-stream"D/A converters

Plays 8cm discs

High power 30W X 4 max.

Triggered audio mute for cellular telephone

Fully detachable control panel

COMPONENTS

PE-2201E-A/E-B Main unit Mounting bracket 300-9035-03 1 Hook plate 330-8216-0L 2 DCP case 335-4848-03 1 Escutcheon

370-9006-22 Screw 716-0726-01

A-lead 850-6681-00

ICAUTIONS

- 1. This appliance contains a laser system and is classified as a "CLASS 1 LASER PRODUCT".
- 2.Use of controls or adjustments or performance of procedures other than those specified in the service manual may result in hazardous radiation exposure.
- 3. Static discharges can destroy expensive component.Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).
- 4. Turn the unit OFF during disassembly and parts replacement.Recheck all work before you apply power to the unit.
- 5. Use of controls or adjustments or performance of proce-

1

dures other than those specified herein may result in hazardous radiation exposure. Do not look into the optical lens at anytime.

- 6. Precautions for servicing the CD player
- 6-1. When replacing the pickup unit, take a countermeasure for electrostatic destruction (protection with a short pin, etc.) to be careful in handling.
- 6-2.When disassembling, be sure to turn off the power. Disconnecting a connector during power-on may destroy the internal IC.
- 7. Precautions for handling the pickup
- 7-1. Destruction due to surge current or static electricity If a large current flows to the LD even for a very short period, deterioration is promoted by a strong light emitted by itself, or it is destroyed. See to it that the LD drive circuit will not be exposed to a surge current caused by a switch and others. If you handle it carelessly, it will be destroyed instantaneously by static electricity applied form a human body. The terminals of the LD have been shorted in order to protect them against electrostatic destruction caused by transportation upon shipment. To make safety doubly sure, earth a human body, instruments, and jigs without fail when installing. It is recommended to spread a ground mat on a work bench or the floor for grounding. To open the shorted parts, use a soldering iron after insert-

ing a connector. Use the soldering iron whose metallic part is earthed or whose insulation resistance is 10M ohm or more (500C DC) in 5minutes after turning on the power, and whose temperature at its tip is 320°C or less (30W), and work quickly. Depending on mechanism, when moving the flexible P.W.B., short it.

7-2.2-axis block

Actuator

The actuator has a powerful magnetic circuit. If a magnetic substance is put close to it. its characteristics will change. Also see to it that no foreign substances will enter through the clearance of the cover.

Cleaning the lens

Adherence of dust to the objective reduces performance. To clean the lens, apply a small amount of isopropylal cohol to lens paper and wipe the lens gently.

7-3. Handling

- a)When handling the pickup drive unit, hold the resin mold chassis.
- b)Note that if the circuitry of the printed circuit board is directly touched by a hand or other substances, the LD may be deteriorated.
- c) If you directly touch the pins of the flexible connector with hand, the LD will be deteriorated. When removing the mechanism from the set, be fully careful in handling.

■ DURING REPAIR OR INSPECTION, OBSERVE THE FOLLOWING

1. Use specified parts.

The system uses parts with special safety characteristics against flame and voltage. Use only parts with equivalent characteristics when replacing them.

Place the parts and wiring back in their original positions after replacement or re-wiring.

For proper circuit construction, use of insulation tubes, bonding, gaps to P.W.B. etc. is involved. The wiring connection and routing to the P.W.B. are specially devised using clamps to keep away from heated and high-voltage parts. So, make sure to replace them back in their original positions after repair or inspection.

3. Check for safety after repair.

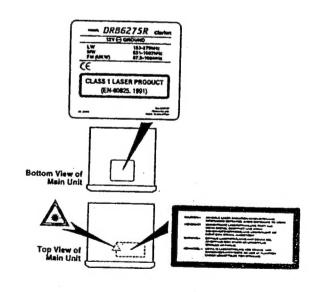

Check that the screws, parts, and wires are put back securely in their original position after repair. And make sure for safety reasons there is no possibility of secondary ploblems around the repaired spots.

Cautions regarding chips.

Do not reuse removed chips even when no abnormality is observed in their appearance. Always replace them with new ones. (The chip parts include resistors, condensers, diodes, transistors, etc.). The negative pole of tantalum condensers is highly susceptible to heat, so use special care when replacing them, and check operation afterward.

5. Cautions in handling flexible P.W.B.

Before working with a soldering iron, make sure that the iron tip temperature is around 270°C. Take care not to apply the iron tip repeatedly (more than 3 times) to the same patterns. Also take care not to apply the tip with force.

ERROR DISPLAY

To protect the system, this unit has been equipped with self diagnostic functions. If a fault arises, a warning is issued by various error displays. Follow the corrective measure and remove the fault.

Erroe display	Corrective measure
ER2	This error display indicates that a fault has arisen in the mechanism of the main unit
ER3	(for example, the disc cannot be changed or ejected). → Check the main unit. This error display indicates that the pickup focus is off because of a scratched disc or some other factor
	during the main unit play Check the compact disc.
